

The Complete Solution for FMD Collection and Processing

Manage growing product compliance requirements without increasing operational burden.

Full Material Declarations (FMDs) create long-term value beyond any individual regulation or customer request. When collected and managed effectively, FMD data can be reused as product compliance requirements evolve.

Turn FMD data into a reusable compliance asset

Evergreen data

Product composition changes less often than regulations. FMDs remain useful for years, reducing supplier outreach while creating a reusable compliance data foundation.

Sub-tier visibility

FMDs provide the material and chemical detail needed to support sub-tier mapping, identify risk, and trace material origins.

Cross-regulation analysis

The same FMD data supports multiple product compliance requirements, customer requests, and future regulations without restarting data collection.

More than FMD data collection

Collecting FMDs is only part of the challenge. Successful compliance programs depend on strong supplier engagement, clear expectations, and proven collection processes. Source Intelligence supports organizations through their FMD initiatives with software, supplier education, and practical guidance.

Contract language

Establish supplier expectations from the start with sample contract language for FMD submission.

Supplier education

Improve supplier participation through Source Academy training and proven engagement strategies.

Collection guidance

Address common FMD collection challenges with proven processes and accountability guidance.

Collect once. Reuse often.

Build a reusable FMD data foundation that grows with your compliance program.
